

PHPStorm 6 and File Watchers

Seamless integration “Transpilers” for LESS, SASS,
CoffeeScript and more

Principles

- Streamlining
 - LESS and SASS/SCSS vs. native CSS
- Compression
- Obfuscation/uglification

Prerequisites

- PHPStorm: needs to be version 6
- NodeJS
- Ruby

Less and YUI Compression

- Can use most middleware solutions,

BUT

- It automatically recognises the Node.js versions.

Can be installed from
<http://nodejs.org/download/>

*(no need to build from source, as
Windows and Mac OS X have installers,
and there are binaries for Linux and
SunOS)*

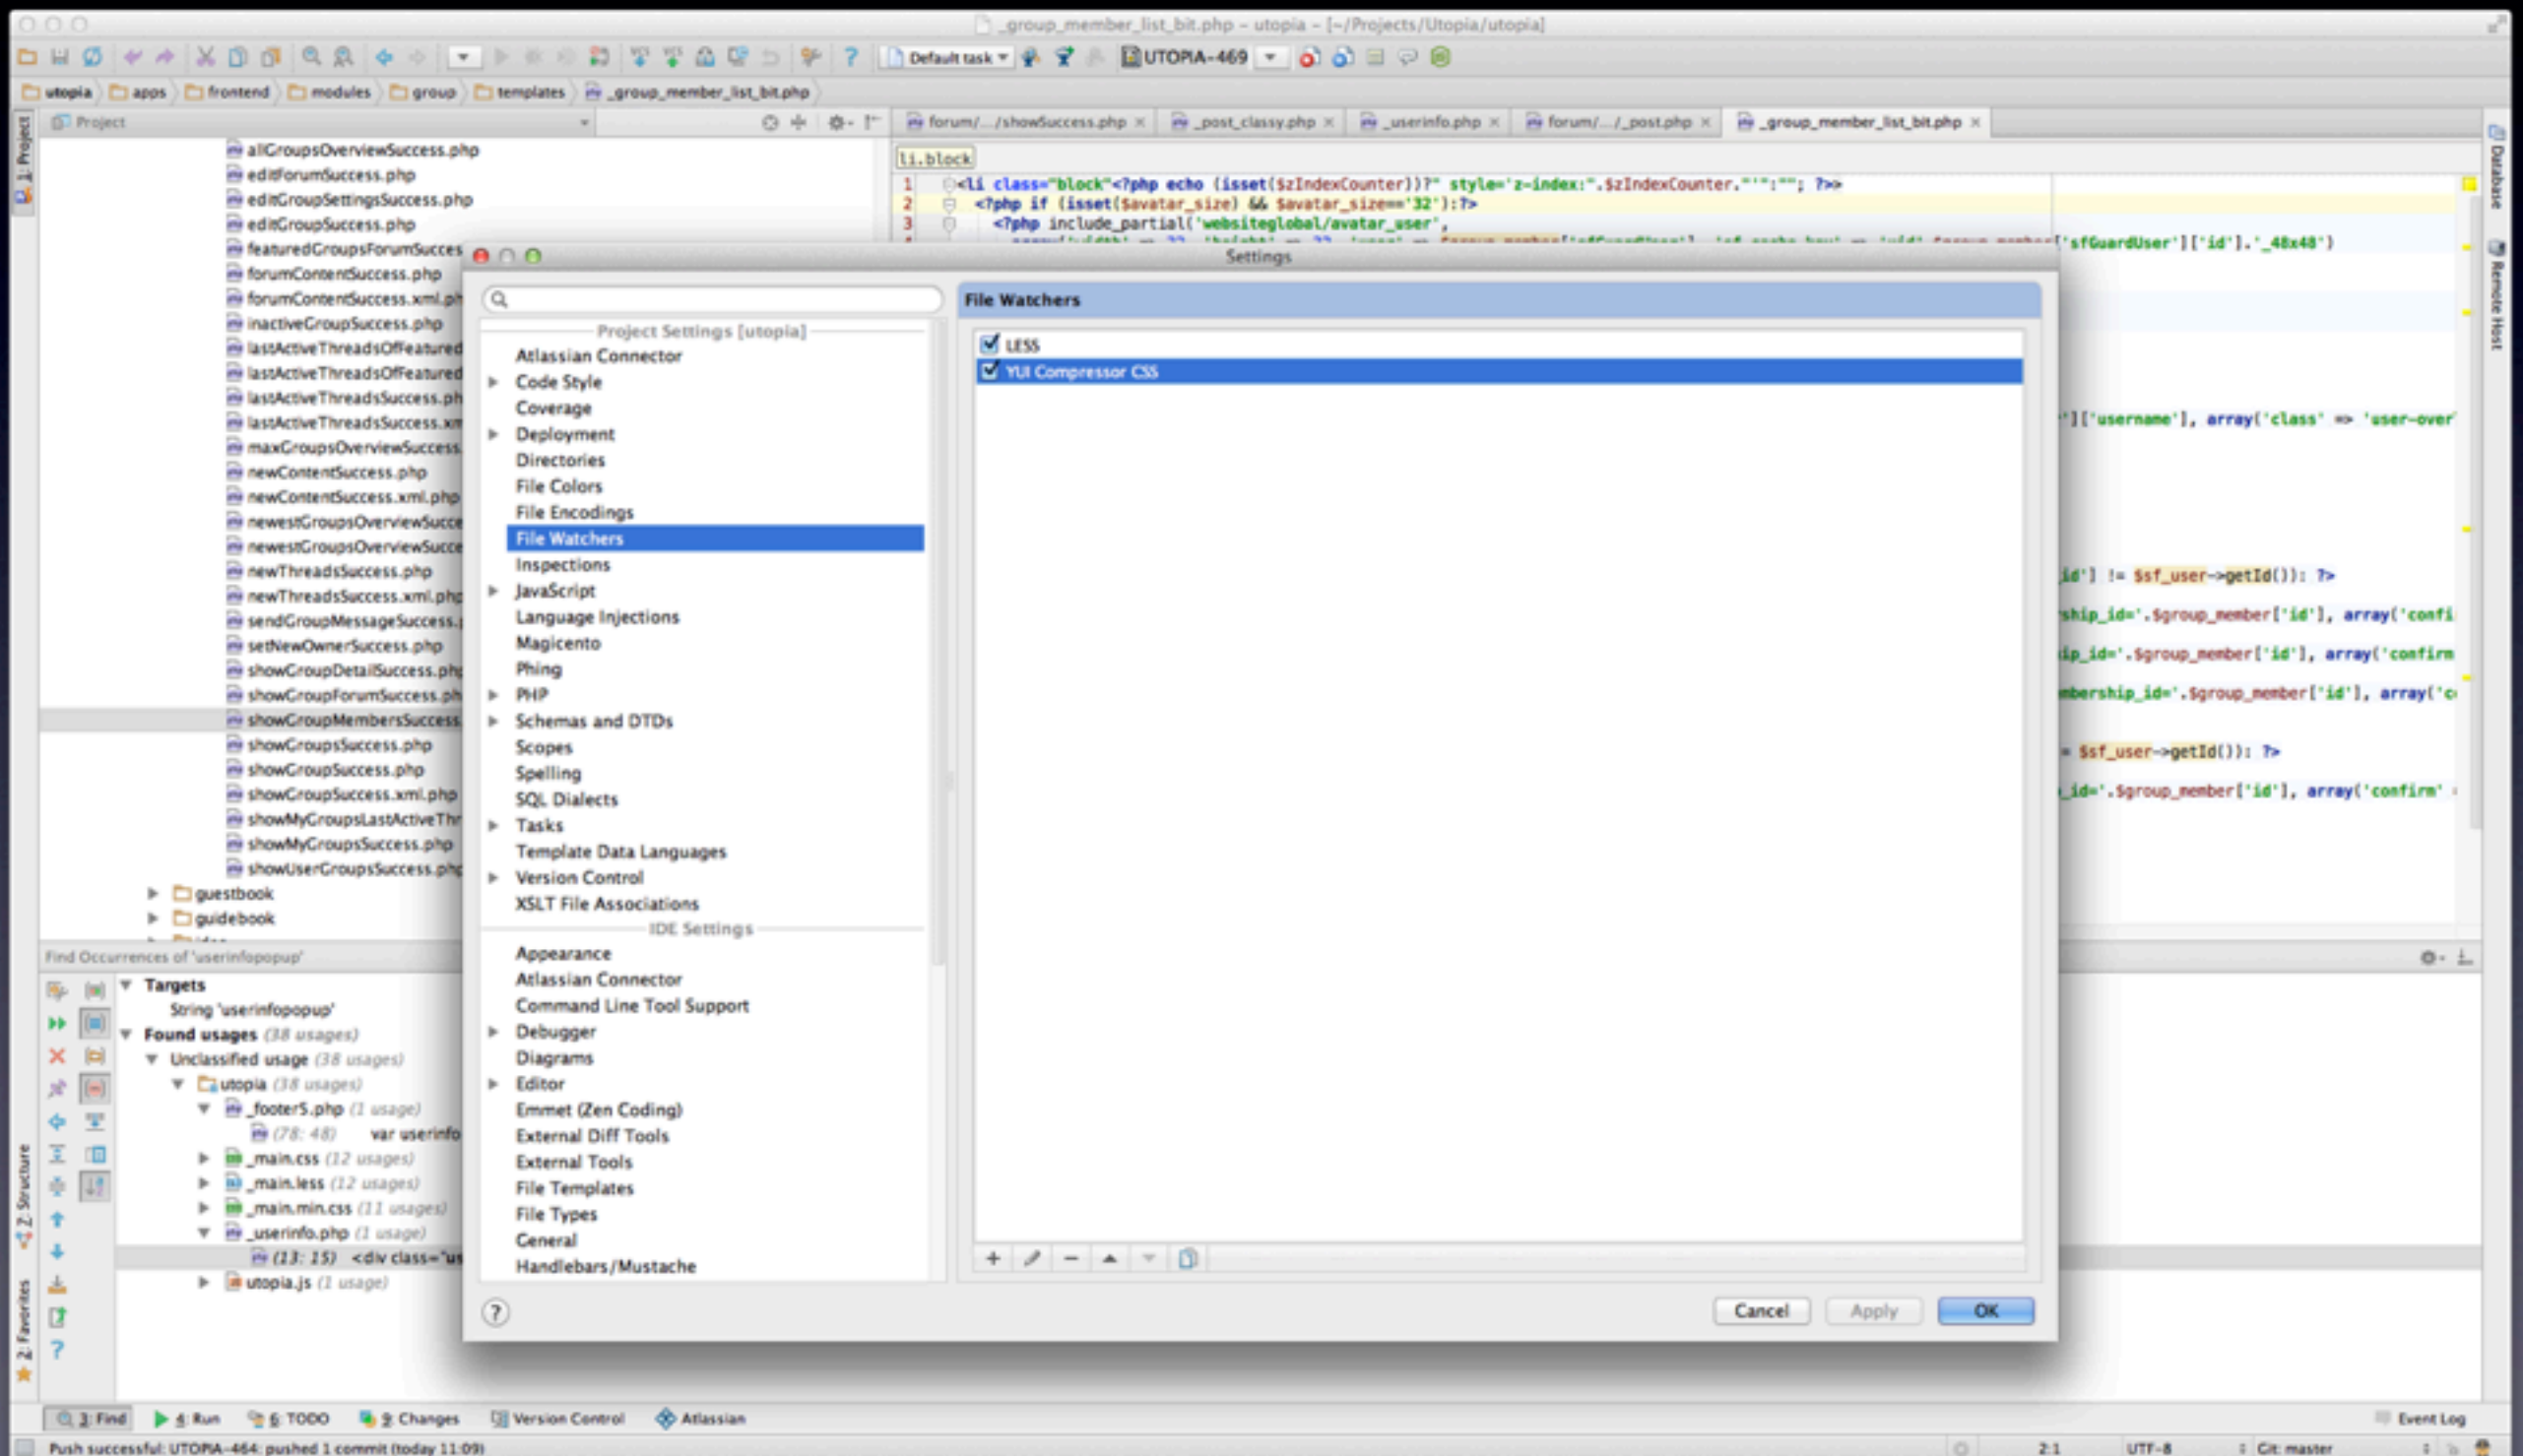

Less and YUI Compression

- Installation:
- Once Node is installed, use the following commands in Terminal:

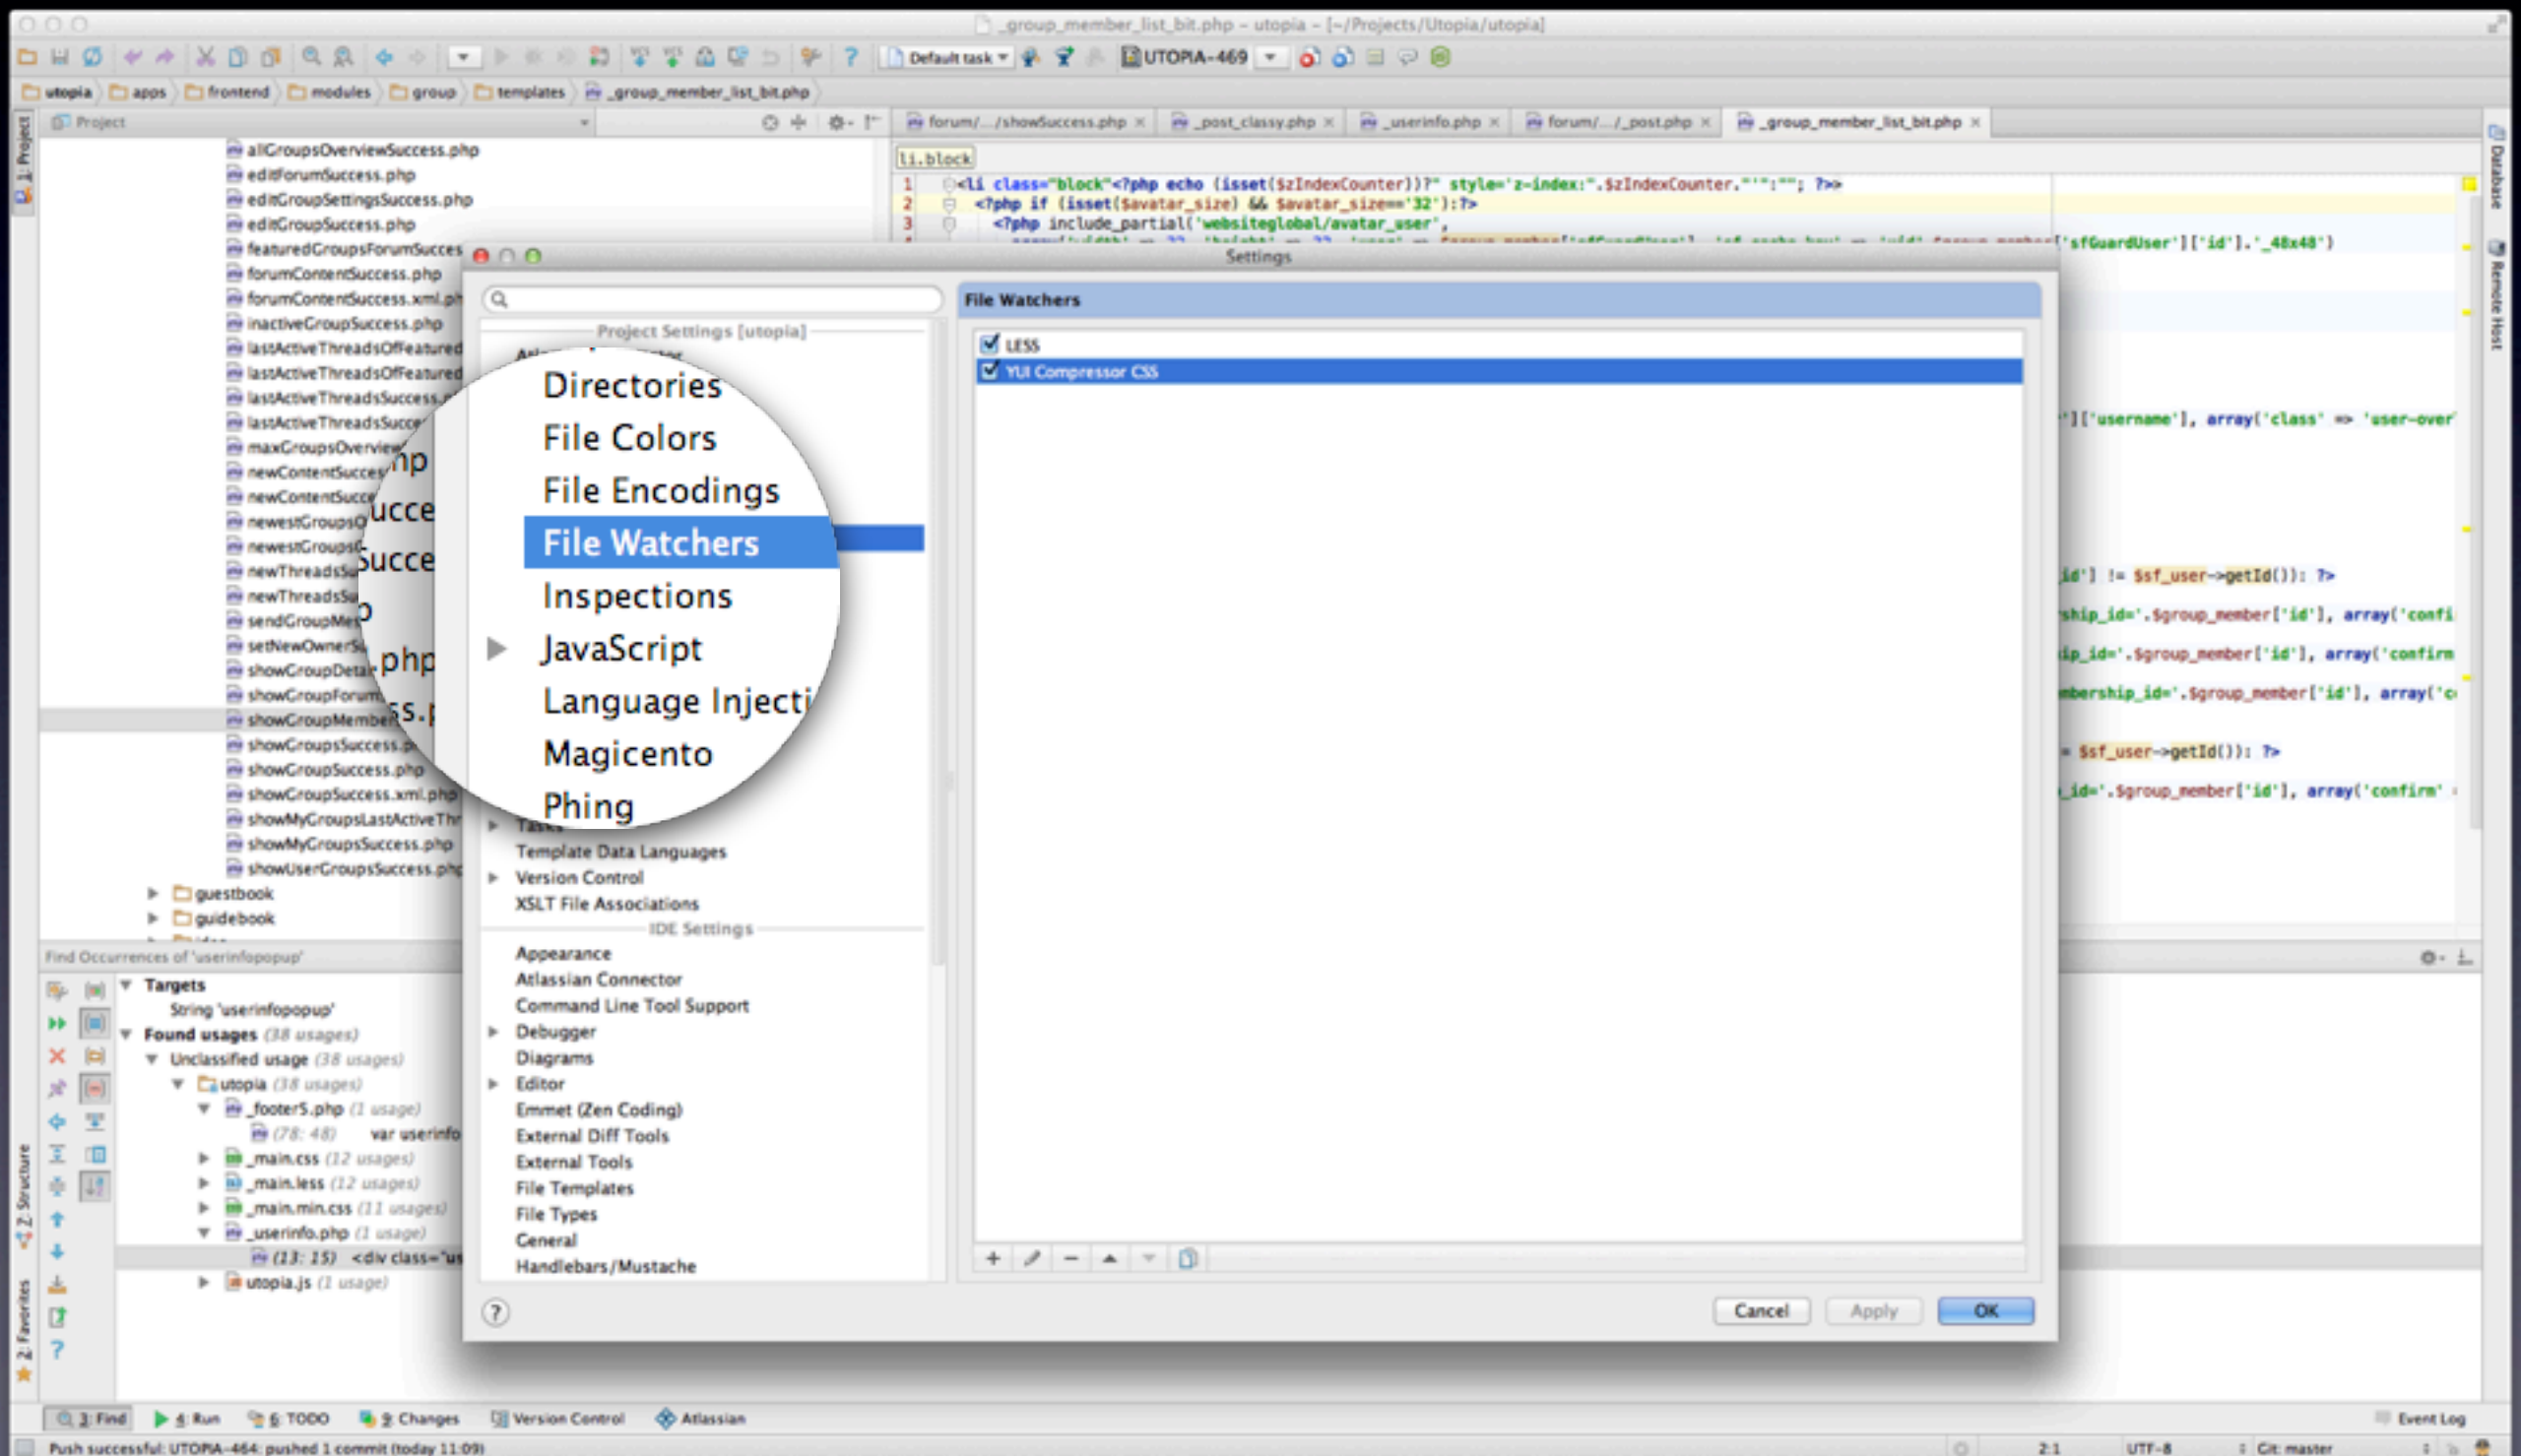

```
$ sudo npm install -g less
```

```
$ sudo npm install -g yuicompressor
```
